

Handsets

With true voice and data convergence a reality you can now stay in contact wherever you go. Samsung's range of handsets and other user-end-points offer a wide variety of ergonomically designed terminals, suitable for use in the office, at home or in any wireless enabled location, such as a hotel or other office.

Communicate in style

Stylish and easy-to-use, each handset is designed to maximise the benefits of the systems functionality- and to give users the appropriate feature set and access levels for their individual needs.

The next evolutionary stage of the business desk phone is here

The new wireless 802.11n SMT-6000 deskphones from Samsung change the rules in IP phone deployment and the user's experience.

Wired or wireless the SMT-6000 handsets are powerful and intuitive business phones that integrate the desk phone with a user's mobile giving users extra functionality and control.

Unified Communications to fit your budget with no compromise

Enjoy full Unified Communication features with the easy-to-control Samsung IP Phones. Integrated with a PC, Samsung's IP Phone Series provides enhanced multimedia UC solutions such as Presence, Scheduler and Instant Messaging.

Direct access to voicemail, call logs and system directory are just a few items accessible at the touch of button and intelligent VPN software allows non-technical users to connect remotely and securely over the internet without any extra hardware, with your calls secured using SRTP and TLS encryption.

Simple and Stylish

The 6000 series benefit from the latest techniques in a digital speech processing and audio technology all delivered over IP, the natural technology for best performance.

Samsung 6000 series digital display handsets feature 32-character, 2 line scrollable LCD screen to display call information and to allow users to navigate effortlessly through system features.

In addition, display handsets incorporate programmable soft keys with tri-coloured LED status indicators that can be used for speed dialling, as well as one-touch feature access keys.

System Compatibility	Samsung Communication Manager / Hosted Samsung Communicator							

Hosted Samsung Communicator

Hosted Samsung Communicator (HSC) brings a wealth of large system features into the reach of all users, from single use micro companies to multi-site corporations. With many standard, key features included and optional add on's available, you can customise your system the way you want it.

Standard features included

Standard features are available to all users and if required, can be configured via the user portal without the need for additional support.

Basic features include:

- Last Number Redial
- Call Waiting
- Call Transfer
- Call Pick-up
- Call Forwarding
- Call History
- Music on Hold
- Auto Attendant menus
- Group Setup
- Mobile twinning

Advanced phone features include additional programable keys for quick dialing and transferring calls with busy lamps to show who is on a call or who is not to be disturbed.

Call Recording is available to all system users

Compatibility & Mobility

You can also improve productivity and customer service experience with the simplified move, add or change process and hot desking which enables 'work as you go' environments.

Supporting seamless handover between desk IP-Phones and smartphones, HSC is optimised for mobile working environments. In addition, the systems feature 'Smart Handover' with seamless call transitions between the Wi-Fi and 3G/4G network and 'Smart Routing' automatically converting 3G/4G calls to internal extension calls.

Deployment Scalability and Easy Management

As businesses grow user licenses can be added without costly software or hardware changes.

Provisioning is quick and the easy management tools reduce the time and money spent on system administration. This all-in-one solution allows efficient and effective management of the entire voice ecosystem in one interface, integrating all administrative functionality for the system's database, applications and troubleshooting.
