

# MVR Interview Recording

## The latest feature for our Mobile Voice Recording solution

The advanced features of Mobile Voice Recording (MVR) from Mainstream Digital, already makes this a unique tool for any business or government agency user, with much more to offer than just recording calls to and from your mobile device.

### Protection

As well as providing protection from litigation over instructions given or received via mobile phone, MVR can help identify training needs, allows the use of photos as proof of attendance or for site inspection, gives GPS information logging and provides mobile estate management.

### Security

The newest feature launched for MVR users, brings the same high levels of data security and management to your memo recordings, as those used when you are on the phone.

Utilising the standard recording capabilities of your Samsung smartphone, you can now activate the “interview” recording feature in the MVR app to record a meeting, interview, conversation, group discussion or just your own voice memos for review later, in the same way as you might use a tape or digital voice recorder.

### Uploaded

The recording is held in the secure area of your phone protected by Samsung KNOX and, as with calls made and received on the MVR platform, is automatically and securely uploaded from your phone to the secure servers of the MVR. Once here, providing you have appropriate security access, it can be searched, audited, commented, shared and reviewed.

### Simple

This simple to use feature, gives you the ability to make recordings at client meetings, to ensure that any comments or issues raised are not forgotten.

### Memos

Only the recordings made via the MVR app will be loaded to the servers, so if you record voice memos separately in another recording application, for your own day to day activity, these are stored

separately and are not affected by the MVR, ensuring you can continue to work in the way you find most efficient.

### Confidential

Interview recording via the MVR not only ensures you have not missed anything, but the security around the MVR gives the client piece of mind that everything discussed is confidential, and cannot be accidentally erased or “lost”.

### Advanced

The advanced MVR security features ensure that even if a phone is temporarily misplaced, permanently lost or falls in to unscrupulous hands, any recordings made via the MVR, cannot be accessed from the handset, and the management tools can locate the device, track its location and remotely wipe the phone and all its data completely.
