

Bringing your telephone system into the 21st century

Many schools will have spent quite a lot of money on a telephone system which works perfectly adequately from a telephone perspective, but seems to lack some of the finesse and features of modern systems being offered to them. You may still have significant investment in a system which is not yet written off and your may want to “sweat the asset” a little longer and yet not forego some of the new features available today.

Features like collaboration tools, easy file sharing, using any device to answer your phone or make calls, or even more advanced features such as meeting transcription, voice recording and encryption are all possible with the right guidance.

With a consultative approach and a skilled team of technicians, Mainstream can make these requirements a reality, and continue to utilise your existing telephone system **as the heart of the solution** and enable you to control your call charges rather than having to become a slave to a global communications or software company with exorbitant call charges.

There is more than one way to solve any problem and our supplier independence enables us to do what is right for you.

With our enviable list of strategic suppliers, we are able to select the technology and solutions that best fits your requirements and budget. Consultation and thorough requirements analysis are all important in delivering your solution.

Technologies that address the BT Switch off, Teams integration, video conferencing, call load and campaign management, computer/telephony integration and even call transcription and encryption.

These and other features are available to you as a result of integrating your existing phone system with a range of integrations that we can offer you and implement at your request.

Our no obligation technical audit will allow our technical staff to appraise your business and then to highlight any areas of concern and work towards suggesting solutions to address any technical dead ends or threats that you may encounter.

Some of our real people doing real things!

To take advantage of our no obligation technical audit, please contact Pete King on 0800 169 6000.
